## Website proposal: Siphamandla Yarona

**Prepared for:** Siphamandla Yarona

**Location:** Katlehong, East Rand, Gauteng, South Africa

**Proposal Type:** Website Development Project Proposal

**Date:** 15 September 2026

### 1. Executive Summary

Siphamandla Yarona is a community-based non-profit organisation in Katlehong that currently cares for almost 100 children from the surrounding neighbourhood. Its core work includes after-school homework assistance, daily feeding — especially for children whose families cannot afford meals after school — and sewing school uniforms, since many families cannot afford to buy new ones.

This proposal outlines a plan to design and develop a professional, functional and easy-to-maintain website for Siphamandla Yarona. The website will serve three main goals: raising public awareness, attracting donors and volunteers, **and** showcasing verifiable community impact.

### 2. Problem Statement

Siphamandla Yarona carries out vital grassroots work in Katlehong, but it currently has no central online platform to tell its story. For potential donors, volunteers and partners, the absence of an accessible website means the organisation's mission is invisible, its impact cannot be verified, and there is no clear path to get involved.

Research shows that when people consider supporting a non-profit, they first look for clear information: who the organisation serves, what its mission is, and what measurable results it has achieved. Without these key details, potential supporters may simply move on.

It is also worth noting that Katlehong has several registered NPOs and community organisations operating in the area. Siphamandla Yarona therefore needs to **establish its own credible online identity** to stand apart and communicate its unique value effectively.

### 3. Proposed Solution

We propose building a website for Siphamandla Yarona that is "mission-driven and action-oriented" in its design. The site will be built around the following core sections:

**Homepage & Mission Display:** A clear, powerful presentation of the organisation's core work — caring for children, feeding, homework assistance and uniform sewing. The homepage will prioritise the most urgent needs and the most direct impact.

**"Our Story" Page:** A narrative presentation of Siphamandla Yarona's origins, community roots and work in Katlehong. Content should include real stories of the children (with appropriate consent) to build an emotional connection.

**Impact & Transparency Page:** Display quantifiable results — the number of children currently served (almost 100), daily meals provided, homework attendance, and more. What non-profit supporters value most is seeing the "real, positive change" their help creates.

**Get Involved & Donate Section:** Clear calls to action guiding visitors to participate through donations, volunteering or material support. Every page should have a clear next step.

**Contact & Location Information:** Provide the organisation's physical address and contact details to build trust and accessibility.

#### 4. Technical Approach

We recommend using the **HTML, CSS and JS** as the technical foundation. The website will use a mobile-first, responsive design to ensure smooth use across smartphones, tablets and desktop devices.

#### 5. Expected Outcomes

Once complete, Siphamandla Yarona will have a **professional, credible and self-maintainable** online platform. Specific outcomes include:

1. **Online visibility:** The organisation's mission and work can be discovered by a wider public, potential donors and partners.
2. **Trust building:** Transparent information architecture and real impact display will strengthen visitor trust.
3. **Engagement conversion:** Clear donation and volunteer entry points will turn visitors into supporters.
4. **Independent operation:** Through training, the organisation's team can update the website independently, without ongoing technical support.

#### 6. Note on This Proposal

This proposal is a project concept document, intended to clarify the direction and core requirements of the website development. A detailed page structure, budget breakdown, project timeline and user testing plan will be added in later stages, after confirmation with the Siphamandla Yarona team.

- Weeks 1–2: Requirements gathering and content collection
- Weeks 3–4: Design and structure approval
- Weeks 5–6: WordPress build and content upload
- Week 7: Testing and revisions
- Week 8: Launch and basic CMS training

#### 7. Budget

- Domain: ~R200/year
- Hosting: R59–R99/month (Axxess or Afrihost entry-level)
- Build: R5,000–R15,000 (basic brochure/CMS site range in South Africa)
- **Total estimate:** R6,000–R18,000 first year

## Website Proposal: Kraft Technology Group

**Prepared for:** Kraft Technology Group

**Location:** Katlehong, East Rand (serving broader Gauteng)

**Proposal Type:** Website Development Project Proposal

**Date:** 15 September 2026

### 1. Executive Summary

Kraft Technology Group is a technology solutions provider serving businesses, homes and industries. The company offers services including cloud management, consulting, cybersecurity, information technology and web development.

The challenge for Kraft Technology Group is not the quality of its services, but its visibility. Small businesses face a fundamental problem: potential clients cannot find them, do not understand their value proposition, and have no reason to trust them over competitors. This proposal outlines a website that positions Kraft Technology Group as a credible, accessible technology partner for the very businesses that need technical help but lack the internal expertise to find it.

### 2. Understanding the Small Business Landscape

To build an effective website for Kraft Technology Group, we must first understand who the client's customers are and what they struggle with. Research into small business challenges reveals several critical insights:

**The Trust Deficit.** Research from the UK Cyber Security Council highlights a major problem in the IT services industry: every IT company promises to be “secure,” “proactive” and “24/7,” but very few can prove it. Small businesses are increasingly sceptical of IT providers. A website that merely lists services will not overcome this scepticism.

**The Survival Mindset.** According to Forbes, approximately 20% of U.S. businesses fail within their first year, and nearly 50% do not survive beyond five years. Small business owners are prioritising survival over growth. They are cautious about spending and need to see clear, immediate value before committing to any service.

**The Complexity Problem.** OECD analysis shows that small businesses don't fail for lack of ambition — they fail because operational and administrative complexity consume the owner's limited time and capacity. A business owner struggling with cash flow, staff, and compliance does not have the bandwidth to evaluate complex IT solutions.

**The Marketing Frustration.** A survey of 2,500 small business decision-makers found that 23% say their biggest marketing pain is “not knowing what's working,” 21% say marketing is “too expensive to do well,” and 19% say it “takes too much time to manage”. The same frustrations apply to choosing IT partners: owners cannot tell which providers are worth the investment.

**The IT Decision Challenge.** Forbes notes that small businesses face a core decision: reactive “break/fix” support versus proactive managed services. Those without in-house IT expertise often need a partner who can act as their de facto IT department.

### 3. How Kraft Technology Group's Website Must Respond

A website for Kraft Technology Group must do more than describe services. It must overcome the trust deficit, simplify complexity, and demonstrate verifiable value.

**Building Trust Through Proof, Not Promises.** The website must lead with evidence. This means displaying certifications, client outcomes, and transparent reporting practices. The Cyber Security Council advises businesses to look for IT providers who can show live dashboards or recent reports without hesitation, and who talk about reducing incidents rather than just answering tickets.

**Simplifying the Complex.** The site must translate technical services into business outcomes. Instead of saying “we offer cloud management,” the site should say “we keep your systems running so you can focus on customers.” Visa’s research confirms that digital tools democratise capabilities once available only to large organisations, but only if businesses can actually use them.

**Positioning as the Accessible Partner.** Given that many small businesses lack in-house IT expertise, Kraft Technology Group should position itself as the accessible alternative to both expensive enterprise providers and unreliable freelancers. The website must communicate: “We are the IT department you don’t have to hire full-time.”

**Addressing the Survival Mindset.** Because small businesses are prioritising stability and cautious spending, the website should offer clear entry points — a free assessment, a consultation, or a simple pricing structure — that reduce the perceived risk of engagement.

#### 4. Key Website Sections

**Homepage & Value Proposition.** A clear statement of who Kraft Technology Group serves and what problem it solves. Priority given to the most urgent client needs: security, downtime prevention, and reliable support.

**“How We Help” Pages.** Separate service pages for businesses, homes, and industries. Each page framed around client outcomes, not technical jargon.

**Trust & Credentials Section.** Certifications, industry partnerships, response times, and any measurable results. This directly addresses the credibility gap identified in industry research.

**“Why Small Businesses Choose Us” Page.** Content that speaks directly to the survival mindset: predictable costs, no jargon, local presence, and a partnership approach.

**Contact & Free Assessment.** A low-friction entry point — a free network assessment or consultation — that allows cautious business owners to engage without immediate commitment.

#### 5. Technical Approach

We recommend a **HTML, CSS and JS website** with mobile-first responsive design. For a technology company, the site itself must demonstrate technical competence: fast loading, secure infrastructure, and clean architecture.

#### 6. Expected Outcomes

1. **Credibility establishment:** Kraft Technology Group positioned as a trustworthy, transparent IT partner rather than another unknown vendor.
2. **Lead generation:** Clear pathways for small business owners to request assessments or consultations.

3. **Local search visibility:** Presence for location-specific technology service queries.
  4. **Differentiation:** A site that speaks to the real fears and frustrations of small business owners — downtime, uncertainty, and being sold to rather than helped.
7. Note on This Proposal

This is a concept document outlining direction and core requirements. Detailed page structure, budget, timeline, and content strategy will follow in subsequent stages.

- Weeks 1–2: Requirements gathering, service priority mapping
- Weeks 3–4: Design mockups and content structure
- Weeks 5–6: Build and integration (forms, basic SEO)
- Weeks 7: Testing, security checks
- Week 8: Launch and team training

## 8. Budget

- Domain: ~R200/year
- Hosting: R99/month ( or R1,188/year)
- Build: R15,000–R45,000 (CMS-driven business site range)
- **Total estimate:** R16,000–R47,000 first year

## Site map

### Level 1 The Entry Point

- **Homepage** (index.html)
  - The main landing page and central hub of the website
  - Contains the hero section, tells client what we do and how to get ahold of us.
  - Every other page is reachable from here

### Level 2 The Main Pages, these are linked from the home page

| Page            | File                         | Purpose                                          |
|-----------------|------------------------------|--------------------------------------------------|
| <b>About Us</b> | <a href="#">about.html</a>   | Company story, mission, vision, why choose us    |
| <b>Services</b> | <a href="#">service.html</a> | Detailed service offerings across six categories |
| <b>Enquiry</b>  | <a href="#">enquiry.html</a> | Free assessment request form (lead generation)   |
| <b>Contact</b>  | <a href="#">contact.html</a> | Phone, email, address, business hours, map       |
